Inter-Registrar Domain Transfer Policy

1. Purpose and Scope

This policy outlines the procedures and requirements for inter-registrar domain transfers in accordance with ICANN's Inter-Registrar Transfer Policy (IRTP) and TRABIS (.tr) regulations. It applies to all gTLD domain names managed by Atak Domain as well as TRABIS-managed .tr extensions.

2. Transfer Prerequisites

For a domain name to be transferred between registrars, the following conditions must be met:

2.1. 60-Day Rule (ICANN IRTP)

A domain name cannot be transferred if:
• It has been less than 60 days since the initial registration
• It has been less than 60 days since the last registrar transfer
• It has been less than 60 days since a registrant information change

2.2. Domain Status Requirements

The domain must be active and must not be in ClientHold, serverHold, or any restricted status.

2.3. Accurate Registrant Information

The registrant must have a valid and accessible email address listed in the WHOIS data to complete the transfer approval process.

2.4. Transfer Lock (Registrar Lock) Must Be Disabled

The domain's transfer lock must be removed prior to initiating the transfer.

2.5. EPP / Authorization Code

The registrant must obtain a valid EPP/AuthCode to initiate the transfer.

3. Outbound Transfer Process (Transfer Away)

3.1. Transfer Request

The customer initiates the transfer request through the gaining registrar.

3.2. Transfer Lock and EPP Code

The transfer lock must be disabled in the customer panel, and the EPP/AuthCode must be retrieved.

3.3. Transfer Approval

The gaining registrar sends a confirmation email to the registrant, who must approve the request.

3.4. Transfer Completion

Transfers typically complete within 5–7 days unless expedited by the registrant's explicit approval through the losing registrar.

4. Transfer Denial Reasons

Atak Domain may deny a transfer for the following reasons:
• Violation of the 60-day ICANN rule
• Court order or legal dispute
• Inability to verify registrant identity or WHOIS data
• Outstanding payment related to the domain
• Domain being in a locked or restricted status
• TRABIS rejection for .tr domain names

5. Inbound Transfer Process (Transfer to Atak Domain)

To transfer a domain name to Atak Domain, the following conditions must be met:
• A valid EPP/AuthCode must be provided
• The transfer lock must be disabled
• The registrant email must be able to receive confirmation messages
• The transfer must comply with ICANN and TRABIS rules
Transfers typically complete within 5–7 days.

6. Transfer Rules for .TR Domain Names (TRABIS)

TRABIS-managed .tr domain names follow specific rules:

6.1. Use of EPP Code

Transfers require an EPP code generated from the customer panel.

6.2. Documentation Requirements

Certain .tr extensions may require additional documents depending on registry rules.

6.3. Blocked or Under Review Domains

Domains subject to legal blocks, TRABIS investigations, or restrictions cannot be transferred.

7. Security and Ownership Verification

During transfers, Atak Domain may conduct additional verification, including:
• Email verification
• Identity or company validation
• Fraud screening
• WHOIS data consistency checks
These measures are taken to protect registrants and do not delay the transfer unnecessarily.

8. Prevention of Unauthorized Transfers

In suspected cases of unauthorized activity:
• The domain may be automatically locked for 60 days
• Ownership verification may be required
• The transfer request may be suspended
These actions comply fully with ICANN IRTP-C requirements.

9. Fees and Renewal

For gTLDs, inter-registrar transfers typically include a one-year renewal.
For .tr domains, TRABIS-designated pricing and rules apply.

10. Policy Updates

This policy may be updated in accordance with changes in ICANN rules, TRABIS regulations, or Atak Domain's internal procedures. The updated policy becomes effective upon publication.
